

## GDG Algiers

# Flutter loaders package

Flutter Forward Extended 2023

## Motivation

Flutter is one of the most powerful mobile development frameworks, and because of being open source, many talented developers help the community with their wonderful packages especially in the field of UI and animations.

Sometimes, it might take time to load a specific page due to the poor internet connection. Some developers invest in building attractive loaders to catch the user's eye and prolong his patience. Have you ever thought about building your own attractive loaders? Well, this is your chance to do it!

## Description

You are supposed to implement the loaders that are provided in the attached Figma file, as well as creating the provided animations, all of the loaders must have a dynamic color and size.

## Expectations

- Building a package from scratch
- You are not allowed to use any existing package
- the package must be published in `pub.dev`

## Assets

All you need is provided in this [Figma file](#)
