Authentication

Flutter Forward Extended 2023

Motivation

For security reasons, almost every application requires authentication. By completing this challenge, you will demonstrate your proficiency in building secure authentication systems using Flutter.

Description

In this challenge you will build an authentication system, you have a suggested UI in the assets, all you need to do is building the necessary screens and integrating the authentication package firebase auth, with state management.

NOTE: We have provided a suggested UI to help, but your application does not have to comply to it.

Expectations

- Using firebase auth for authentication.

- Clean architecture with efficient exception handling.
- Using state management for the integration, any package is accepted.

Assets

the necessary assets for the challenge have been provided in the directories labeled **'/assets'**
